

Polymorphism Example.

```
#include <iostream.h>
#include "Grandfather.h"
#include "Parent.h"
#include "Child.h"

int main()
{
    Grandfather *pGF;

    pGF = new Parent();

    cout << pGF->GetAge() << endl;

    pGF = new Child();

    cout << pGF->GetAge() << endl;

    delete pGF;

    return 0;
}
```
